In 2007 the Central Virginia Gold Prospectors received the final approval for dredging in Virginia. We also are trying to see what the majority of our membership is using. We ask you read the attached approval from the State of Virginia.

The club voted January 19,2008 as to the specific size of a dredge used on our properties. It is the decision of VMRC that the inside diameter of the suction hose can be no larger than 4 inches as far as they are concerned. As far as The Club Properties Only, the club discussed this issue-we are not trying to enforce Virginia laws but we want to set parameters as to what the club will allow. The motion was made to allow use of a 4inch or less manufactured size dredge.
